# The London Strategic SuDS Pilot

Graeme Kasselman and Craig Boorman (Thames Water)

on behalf of the LSSP Steering Group

### The case for Distributed SuDS

Strategic delivery of small SuDS is an investable and sustainable approach to adapting to climate change

### Need for change

"UK struggling to keep pace with climate change impacts"

### Goal 2: Adapt to protect communities and natural habitats

### Challenges to address

- Funding mechanisms
- Availability of space
- Appreciation of aggregated benefits
- Time/effort to access funds

### Project Components and Delivery Partners

Modelling - Stage 2

Comprehensive Economic Valuation

- More ambitious used sewer models and 2D ground level data
- Modified the selection of SuDS to reflect the more dense urban environment
- Optimisation carried out based on TfL hex grids (modelling >150,000 SuDS features compared to ~ 2,000 in Stage 1)
- Optimisation shows where the most significant hydraulic benefit is likely to be realised with the least investment in SuDS

Spatial distribution of the realisation levels for the All Streetscape SuDS

# Modelling results

### Opportunities for street SuDS

### Sewer capacity

### SuDS Delivery

Haselbury Neighbourhood (Enfield), Field End Road (Hillingdon)

### Key Finding – Optimise Delivery Natural Capital Value Increases the Benefit-Cost Ratio from 0.4 to 1.6 7.0 Optimisation can be Used to Effectively (Average of un-optimised Streetscape SuDS Scenarios) 6.0 Identify the SuDS Opportunities that 5.0 Generate substantially Higher benefit-All SuDS Opportunities (un-optimised)... 4.0 cost than Non-optimised Locations 3.0 2.0 £700 Million Capital (On Average per London Borough) Break Even benefit-cost 1.0 Investment in SuDS 0.0 Could generate ... £300 Million in Flood £500m £1.000m £1,500m £2,000m £m .... Damage Reduction (All Streetscape SuDS Scenario Data) £800 Million in Natural SuDS Opportunities (ordered by most effective SuDS Features) Capital Value 25% Creation of Requiring Wastewater Comparable or Less CAPEX than 63% 89% Network Capacity for between 116,000 Typical Strategies Flood Damage Reduction (proportion of total possible) and 180,000 to Create the additional dwellings Same Capacity 5% of Most Optimal SuDS Features Represent... (Beckton & Crossness STW Catchments) (On Average per London Borough) £35 Million Capital £3 Million in Street Tree SuDS Improvement Investment in SuDS Could Secure Full FCERM GiA Funding Could generate ... £190 Million in Flood (On Average per London Borough) .... Damage Reduction

£40 Million in Natural

Capital Value

Project Already Secured £600,000 in Short-term Local Levy Funding

# Key Finding – Delivery needs to be Opportunistic

Average cost per  $m^2$  of SuDS

Integrating SuDS into other streetscape or public realm works can reduce costs and realise additional funding

Average cost per SuDS feature

Opportunistic Delivery Uncertainty Range Direct Procurement Uncertainty Range

# Monitoring

- Support the business case for Dispersed SuDS
- Lead by research team from University of East London (UEL) and Thames21
- A physical science and social science monitoring plan
- Evaluate the impact of a wide range of benefits
- Plug knowledge gaps

### Green spaces aren't just for nature – they boost our mental health too

We're beginning to understand just how vital access to natural space is for our mental well-being – with implications for how we design cities worldwide

ENVIRONMENT 24 March 2021

### Be part of our research

Are you involved in the planning, delivery, and/or stewardship of SuDS or Green Infrastructure? Take part in our short online survey

C-MeX is the customer measure of experience. It looks at residential customers' satisfaction with their water company

### Recognition

Winner of the Surface Water Management Category at Flood and Coast Excellence Awards 2021

Environment Agency

FLOOD

Bild Study (LSS)

### London Strategic SuDS Pilot Study

London Drainage Engineers Group, Greater London Authority, Thames Water, Transport for London, Environment Agency, Thames Flood Advisors, Arcadis and the London Boroughs of Enfield, Hillingdon and Camden

### What next

- 1. SuDS monitoring research project ongoing
- 2. Formation of a SuDS Working Group in the Thames RFCC
- 3. SuDS Delivery Pilot commenced in 2021
- 4. Extend beyond London
- 5. Thames RFCC have allocated an additional £1m of levy funding LLFA's can apply for

Study report available on the Susdrain website
